

Interface pad for the Handy by Mirka

Update!!

Having personally suggested the creation of the Handy, I noticed when i tested it before it launched that it didn't have any foam padding, under the base pad which would give the tool even more scope.

Scope that is much needed, welcomed and required.

For example when sanding uneven surfaces the hook & Loop foam interface pad acts like the suspension on a vehicle, almost buffering the humps and bumps that are some times present whilst sanding uneven substrates.

The foot print of the Handy is replicated with 55 extraction vent holes

And as its hook & Loop it extends the life of the Handy as it protects the base pad hook & Loop.

This has now I am glad to say been produced and is available from your Mirka suppliers!!

Features

1. Soft foam
2. Hook & loop
3. 55 extraction holes

Benefits

1. Softer sanding
2. Helps sanding uneven substrates
3. Lengthens life of sanding block by protecting the base pad from wear

My next Mirka suggestions are inter-changeable shaped stick on pads,

For both Handy and other products

For example.....

1. A curved pad for sanding coving
2. A Square right angled pad for sanding square spindles/frames
3. A round hollowed pad for plain railings/spindles
